

From an ambiguous problem to a decision people can act on

A workshop-led example of how I would combine analysis, stakeholder facilitation and practical delivery to move a complex transformation question forward.

Scope note. Informed by Griffith University's public strategy and education/student-experience priorities. All operating data is synthetic; no Griffith internal data is used.

23 Leadership workshops	~200 Mid-to-senior managers	3 cities Brisbane · Perth · Montreal
-----------------------------------	---------------------------------------	--

1 | The question

How could a large multi-campus university make student support simpler and more consistent without immediately committing to a major technology replacement?

I would start with hypotheses, not a predetermined solution: entry-point fragmentation, incomplete resolution, inconsistent knowledge and the suitability of different demand for self-service.

2 | The workshop is the decision mechanism

Before Pre-wire sponsor and key stakeholders. Review data, policy and constraints. Send a short pre-read that separates fact, assumption and open question.		In the room Frame the decision, validate pain points, identify root causes, stress-test options and agree the smallest useful pilot.	After Issue decisions, owners and open questions. Convert outputs into the next analysis or delivery backlog.
Time	Activity	Outcome	
0-10	Frame	Purpose, guardrails and decision required.	
10-25	Evidence check	Separate facts from assumptions and identify evidence gaps.	
25-45	Map friction	Handoffs, repeat work, ownership gaps and exceptions.	
45-60	Root cause + principles	Agree what a better future state must achieve.	
60-75	Stress-test options	Compare process, triage and platform choices.	
75-85	Define pilot	Scope, measures, participants and exclusions.	
85-90	Commit	Decisions, owners, open questions and next review.	

3 | Options and judgement

A · Standardise Common process definitions, clearer ownership and controlled knowledge. Fast and lower risk, but may leave entry points fragmented.	Recommended first move B · Standardise + common triage Option A plus common intake/triage and targeted digital self-service. Enough change to test the operating model, but small enough to refine.	C · Major platform transformation Consolidate technology and redesign around a new platform. Potentially right later, but not the first decision without evidence.
Recommendation: prove the operating model first. Support a larger technology investment only after the pilot shows where technology is genuinely the constraint.		

4 | 12-week pilot

1-2 Understand Baseline + interviews	3-4 Design Triage + ownership	5-7 Prepare SOPs + training	8-10 Pilot Run + learn	11-12 Decide Scale / iterate / stop
FCR Should improve		Transfer rate Should fall		Repeat contact Should fall
			Satisfaction Must not deteriorate	

5 | Relevant experience

Senior stakeholder facilitation 23 leadership workshops across Brisbane, Perth and Montreal for nearly 200 mid-to-senior managers.	Transformation delivery Supported a global IS&T organisational transformation with senior leadership, HRBPs and external partners.
Analysis and decision support Portfolio reporting, process maps, governance artefacts and multi-decade scenario/TCO modelling.	Capability and future-state thinking Co-developed the Pathfinder PowerApp capability framework and supported workforce/capability initiatives.

Public context: Griffith University Strategic Plan 2025-2030 and Education and Student Experience Plan 2026-2030. Independent work sample prepared by Yaxiya (Cynthia) Li.
